MISON CONCEPTS

JAROFF DESIGN SERVICES

Original Design

Jaroff Design offers the opportunity to commission original work by Joseph Jaroff, whether for an aspect of an architectural project or for a site-specific sculpture. Joe personally works with each client to discover the aesthetics and goals for the commission. This ongoing creative exchange ensures a finished work that fulfills the desired aspirations of the client and represents a unique artistic vision for each project.

Design Consulting & Development

Jaroff Design serves as project designer and manager for metal and glass components within an overall project, taking designs from vague sketches to engineered solutions, detailed drawings, and material selections. Jaroff Design can then coordinate the project's realization, from production to installation, interfacing with all involved parties to ensure smooth and successful completion. In a problem-solving capacity, Jaroff Design steps in when unforeseen complications arise, specializing in complex issues relating to joining, finishing and fabrication.

While Jaroff Design generally advises and manages multiple aspects of a given project, we can also provide targeted consulting in the following areas:

Feasibility Studies

Our years of experience make us a natural choice for evaluating the technical or fiscal feasibility of complex ideas relying on metal or glass components.

Selection & Testing of Materials and Finishes

With our in-depth knowledge of materials and finishes, we are able to determine the best material choices for a project, including possibilities not known to those less familiar with the newest innovations in metal and glass. New material applications can be tested for wind, abrasion, load, seismic action, ultra violet light, delaminating, premature aging, salt and chemical reactions, to name a few.

Budgeting, Estimating & Value Engineering

Having an honest estimate and realistic budget goal is the best way to ensure a stress-free building venture. Jaroff Design's expertise allows us to give you line by line costs, as well as built-in alternates that can be incorporated into the budgeting plan. Benefiting from years of experience with cutting-edge materials, Jaroff Design's value-engineering services allow clients to realize their design criteria while remaining within budget.

Shop Drawings & Detailing

By using material experts for drawings and detailing at the outset, many would-be problems associated with working in metal and glass can be avoided. Structural concerns, assembly and fabrication details, coordination and cost issues that might go unnoticed by those less familiar with these materials are resolved before they become problems, saving time and money. 3-D CAD modeling is also used as a tool for visualizing tricky details or entire projects.

Production of Samples and Models

When utilizing unusual techniques or materials, it can be hard to visualize the finished project from drawings alone. Jaroff Design can provide samples of materials and finishes or build scale mock-ups for discovery, testing, lighting design and final approval.
